

3rd Technical Advisory Committee meeting
Prague ,Thursday, 16th of March,2017

SEERC

RWG 02 REPORT

Prof. Dr. Maks Babuder, RWG 02 Convener

Content

1. RWG 02 First Meeting Report
2. RWG 02 Membership
3. RWG 02 ToR Modification
4. RWG 02 Questionnaire
5. Next Meeting

RWG 02 First Meeting Report

Agenda of the first RWG 02 Meeting Ragusa (Sicily)

9TH October 2015

1. Introductive welcome by the Convener
2. Introduction of members by themselves
3. Brief survey of work done by former CIGRE WGs related to this issue
4. Survey of accomplished activities Country by Country
5. Discussion regarding ToR modification/adjustment
6. Future work
7. Conclusions and closing of the meeting.

RWG 02 Membership

Slovenia:	Maks Babuder (maks.babuder@eimv.si) Marko Hrast (marko.hrast@eles.si) Aleksander Polajner (aleksander.polajner@eles.si)
Italy:	Marco Giussani (m.giussani@tamini.it) Stefano Zunino (stefano.zunino@terna.it); Francesco Dicuonzo (francesco.dicuonzo@terna.it)
Czech Republic:	Tomáš Linhart (Linhartt@ceps.cz)
Croatia:	Goran Majstrović (gmajstro@eihp.hr) Božidar Filipović-Grčić (bozidar.filipovic-grcic@fer.hr) Viktor Milardić (viktor.milardic@fer.hr) Srete Nikolovski (srete.nikolovski@etfos.hr)
Serbia:	Duško Tubić (dusko.tubic@ems.rs) Saša Minić (sminic@ieent.org)
Ukraine:	Kontorovych Leonid (leonid.kontorovych@ztr.com.ua)
Turkey:	Mevlüt Akdeniz (mevlut@ieee.metu.edu.tr) Selim Yurekten (s.yurekten@enpay.com) Ömer Onur Çakmak (onur.cakmak@teias.gov.tr)

This Membership may be reconsidered taking into account the modified ToR

RWG 02 ToR Modification - Background

The reactive power support and its control became a typically local and regional issue. The large penetration of RES gave to it a primordial importance. Different networks, different compensation devices and different optimization objectives in SEER may lead to various approaches and solutions. The improvements in static reactive power sources performance and development of promising optimization methods calls for a mutual cooperation between experts in the SEE Region. This document embraces and describes the objectives of and the reasons for establishing a working group aiming to increase the needed knowledge and sharing of experiences concerning the use of reactive power sources necessary for better cooperation of regional interconnected electric power transmission systems and power systems in general.

The cyclic nature of reactor power caused by new supply side facilities (some of renewable sources) as well as challenging demand side requirements are impacting on the network planning and invite to introduce new advanced methods to handle this problem. Maintaining of the highest allowed voltage (maximum operating voltage) in any of the network's location requires a suitable balancing of the reactive power in the system, taking care of the voltage profile, energy losses and reliability of the system. Many of technical issues concerning reactive power compensation have been dealt with in the past by the CIGRÉ WGs (Dealing with Reactive Power Compensation Analysis and Planning Procedures).

This Regional Working Group will seek to develop a Technical Report which may provide Guidelines for the analysis, planning and commissioning of compensating stations projects for the interconnected transmission system in the SEER.

RWG 02 ToR Modification – Scope of Work

1. An up to date SEERC survey of selected and applied solutions to cope with overall system reactive power challenges
2. Concepts of future AC and DC interconnected transmission systems
3. Reactive power planning practice (analysis technique and optimization objectives)
4. The impact of reactive power on voltage profile and loads (case studies aiming to select the size, location and type of compensator units)
5. Experience with various devices (Shunt reactors, Synchronous condensers, STATCOM, SVC...)
6. Regulation and compliances (Related to Network Codes and Equipment Standards)
7. Reactive sources general design concepts and operating characteristics
8. Cases of resumed operation of turbine generators after a thermal plant shutdown and its use as a reactive power source
9. Comparison of Technologies and Reactive power strategies (based on latest related CIGRE Brochures)
- 10. Report**

RWG 02 Questionnaire

1. A Questionnaire should be distributed under control and guidance of assigned RWG 02 members
2. The Questionnaire should preferably be followed through by a minor group selected from members who can easily meet
3. The data to be gathered should cover the major portion of the WG's scope of activity

Next Meeting

The best opportunity for a before long (means ASAP) meeting would be the day after the Ljubljana CIGRE C4 Colloquium on **September 21, 2017**
